EXPERIENCE

Front-end Developer Intern

Remote

Red Tree India

Aug 2025 – Mar 2026

- Built and maintained a React.js and TypeScript front-end with a scalable, reusable component-based architecture; took end-to-end ownership of features from Figma handoff to production deployment.
- Developed highly interactive UI features including real-time data updates and dynamic content feeds; applied memoization, lazy loading, and efficient re-render strategies to keep the interface fast and responsive.
- Integrated REST APIs with async data-fetching, auth flows, and structured error handling; collaborated directly with backend engineers to optimize data-fetching patterns and reduce payload overhead.
- Used Tailwind CSS for consistent, scalable styling across components; maintained codebase with Git and GitHub using disciplined branching and code review practices.
- Wrote clean, modular, well-documented code and contributed to architectural decisions in a fast-moving, remote-first environment with minimal oversight.

Web Design Virtual Intern

Remote

AICTE-Eduskills

Jan – Apr 2025

- Built responsive, accessible web layouts using HTML, CSS, and Tailwind CSS; focused on performance, cross-device consistency, and visual hierarchy.
- Translated Figma prototypes into pixel-accurate, functional UI components through iterative refinement; worked independently with a high degree of ownership over deliverables.

OPEN SOURCE CONTRIBUTIONS

react-big-schedule – Performance Optimization

- Eliminated unnecessary re-renders using `useMemo` for derived data and inline styles; fixed stale closures with refs; extended `ResourceEvents` to `PureComponent` and wrapped `BodyView`, `ResourceView`, `HeaderView` with `React.memo` – directly improving rendering performance in a complex, real-time scheduling UI.
- github.com/ansulagrawal/react-big-schedule/pull/327

react-big-schedule – Multi-Resource Event Creation

- Implemented merged multi-resource event creation via vertical drag-selection across a shared scheduler canvas; added `resourceIds` support preserving backward compatibility; improved interactive row/cell highlight feedback for real-time visual cues.
- github.com/ansulagrawal/react-big-schedule/pull/336

jeffrescignano-io – Semantic CSS Refactor

- Renamed Webflow-generated utility class names to semantic equivalents and updated all component and global CSS references, improving long-term maintainability of a production codebase.
- github.com/JeffResc/jeffrescignano-io/pull/131

PERSONAL PROJECTS

TaskFlow – Full Stack Task Manager

- Built a full-stack task manager in React.js and TypeScript with real-time UI updates, CRUD operations, and a scalable component-based architecture; containerized with Docker for consistent deployment.
- Designed RESTful APIs with Node.js and Express; integrated MongoDB for persistent storage; applied efficient data-fetching patterns to keep the UI snappy under changing state.
- Stack: React.js, TypeScript, Node.js, Express.js, MongoDB, SQLite, Docker. taskflow-plum-one.vercel.app

FinLens – Personal Finance Tracker

- SPA built with React.js and TypeScript featuring dynamic transaction categorization, filtering, and live chart updates; Tailwind CSS used throughout for a responsive, accessible UI.
- Flask REST API consumed by the React frontend; Firebase used for auth; Pandas for server-side data aggregation and analytics pipeline.
- Stack: React.js, TypeScript, Tailwind CSS, Python, Flask, Pandas, Firebase. finlens-seven.vercel.app

Language School – Frontend Showcase

- Responsive static landing page with smooth anchor navigation, scroll-triggered section animations, active navbar highlighting, and fixed-navbar UX handling – demonstrating performant, interaction-rich UI without a framework.
- Stack: HTML5, Tailwind CSS, Vanilla JavaScript. language-school-showcase.vercel.app

Expense Tracker (Splitwise-Inspired)

- Full CRUD with category and participant filtering; modular architecture separating UI, business logic, and SQLite persistence layers; focused on clean component design and maintainable code structure.
- Stack: JavaScript, HTML, CSS, SQLite. expensetracker-kex03.netlify.app

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3, SQL, C/C++

Frameworks / Libraries: React.js, Next.js, Tailwind CSS, SASS, CSS Modules, Node.js, Express.js, Flask, Pandas, Streamlit

State Management: Zustand, Redux (conceptual), React Context + `useReducer`

Real-time / APIs: REST APIs, Firebase (Auth, Firestore, Realtime Database), WebSockets (familiar)

Performance: `React.memo`, `useMemo`, `useCallback`, lazy loading, code splitting, SSR concepts (Next.js)

Tooling / DevOps: Git, GitHub, Docker, Figma, VSCode, Microsoft Azure

Databases: MongoDB, SQLite, MySQL, Firebase Firestore

EDUCATION

Bachelor of Computer Applications

University Institute of Computing, Chandigarh University

Diploma in Computer Applications

Perfect Computer Institute, Chandigarh
